B S DEGREE
PROGRAM BOOKLET

ELECTRICAL ENGINEERING

AT

THE PENNSYLVANIA STATE UNIVERSITY

BLUE PROGRAM
(ADOPTED AUGUST 2001)

(REVISED August 2007)
Goal Statement

Electrical engineering is the application of electronics, electrical science and technology, and computer systems to the needs of society. The electrical engineering faculty is committed to providing a curriculum that educates students for both professional careers in electrical engineering and advanced study at the graduate level in electrical engineering or a related field. A combination of required and elective courses ensures that students acquire a broad knowledge base in electrical circuits, digital systems, electronic devices, electromagnetics, and linear systems, as well as expertise in one or more areas of specialization, such as communications, computer hardware, control systems, digital signal and image processing, electromagnetics, electro-optics, electronic material and device processing, electronic design, power systems, and remote sensing and space systems. Students learn electrical engineering theoretical, analytical, and design concepts through lecture-based courses. Additional problem-solving skills and practical experience are developed through design projects and laboratory assignments, which also provide opportunities for learning team-building and technical communication skills.

Program Objectives

The BSEE program at Penn State prepares its graduates to:

1. Practice electrical engineering through technical assignments such as design, product development, research, manufacturing, consulting, testing, sales, and management.
2. Be proficient in the use of modern design tools.
3. Participate and provide leadership on teams comprised of individuals with diverse professional and cultural backgrounds.
4. Have effective written and oral communication skills to convey information and ideas.
5. Continue professional development through activities such as graduate school, continuing and distance education, professional training, and membership in professional societies.
6. Conduct themselves in a professional and ethical manner.

Outcomes

Outcome #1. Graduates will have attained the fundamental background in mathematics, natural science (physics and chemistry), and computer programming necessary for further study in electrical engineering.

Outcome #2. Graduates will have acquired a broad knowledge base in both the quantitative and physical aspects of electrical engineering.

Outcome #3. Graduates will be able to apply their electrical engineering knowledge base to the solution of engineering problems.

Outcome #4. Graduates will develop a professional attitude towards career opportunities and responsibilities.

Outcome #5. Graduates will have good interpersonal and communication skills.

Outcome #6. Graduates will understand their role in society.

Now that you have officially achieved status of “Electrical Engineering major”, we are happy to welcome you to the BSEE program. This booklet has been prepared for your use as a guide for your studies and as a means of providing you with much of the information that you may need as you continue to work towards your BSEE degree. We hope that you read it carefully, and we invite your inquiries about any of the questions or issues that are related to your program. The Academic Affairs staff in 121 Electrical Engineering East is here to serve you.

Please watch the bulletin boards in the lobby of Electrical Engineering East for announcement of special courses, news related to scheduling or textbooks, and other special opportunities. Also, regularly check the announcements section on our web page at http://www.ee.psu.edu for other important information. We will also keep in contact with you about many important matters via a departmental email list.

Again, welcome to Electrical Engineering. We wish you well in your studies and offer our services to assist you.

W. Kenneth Jenkins  
Department Head

A. David Salvia  
Undergraduate Program Coordinator
I. DEPARTMENTAL INFORMATION

I. 1. Degree Programs

The Department of Electrical Engineering at University Park offers BS, MS, and PhD degrees in Electrical Engineering. With about 50 faculty members, the department serves approximately 400 upper-class undergraduates and 250 graduate students. This booklet has been assembled to provide program information specifically for undergraduate EE students.

The Electrical Engineering B.S. degree emphasizes a foundation in science and mathematics that is followed by required Electrical Engineering course work and concludes with the student’s selection from nearly 30 specialty courses offered to seniors. The program is broadened by courses in communication skills, arts, humanities, social sciences, and other engineering disciplines. Electrical Engineering electives are classified generally in the areas of electronic materials and devices, circuits, remote sensing and space systems, applied electromagnetics and wave propagation, control systems, signal and image processing, electro-optical devices and systems, power systems, communications, and computer engineering.

I. 2. Academic Affairs Office Personnel

The Office of Academic Affairs (121 EE East) is where initial questions and issues related to the program and graduation requirements should be brought.

David Salvia is the Undergraduate Program Coordinator in the Electrical Engineering Department. He is your main source of information for short- or long-term schedule planning, assistance with selection of Electrical Engineering electives, and guidance in handling academic/graduation problems. His office, 114 Electrical Engineering East, is located inside the Academic Affairs Main Office (121 Electrical Engineering East). He can also be reached at 865-7227 or through email at dsalvia@psu.edu. He generally has about 15 hours of open advising each week. You will be informed of these hours at the start of each semester.

The Undergraduate Program Staff Assistant, Gabi Rhinehart, is located in 115 Electrical Engineering East. Your main interaction with her will be dealing with audits, graduation checks, university policies, and questions related to graduation. Her phone number is 865-7272 and her email: gbr6@psu.edu.

Janet Woomer, the Department Receptionist and Undergraduate Secretary, is located at the main desk in 121 Electrical Engineering East. Her phone number is 865-7667. She can assist you with scheduling issues such as drop/add and section changes for courses. She is also a good source for obtaining office phone numbers, office addresses, or other information of that sort. If you don’t know whom to contact when you have a problem or concern, Janet is a good place to start.
I. 3. **Student Organizations**

A majority of students in the program choose to join the student branch of IEEE (Institute of Electrical and Electronics Engineers). Regular meetings and special events are scheduled throughout the year, and in addition, members receive subscriptions to *Spectrum*, *Potentials*, and *The Institute*. *Potentials* carries articles and advertisements prepared specifically for a student audience, whereas the other two are distributed to all members of IEEE. Watch for sign-up tables in the lobby of EE East early in the fall semester and watch for the newsletter published by the local chapter. Professor Lynn A. Carpenter is the faculty adviser. You may visit the IEEE web page at: [http://ieee.ee.psu.edu](http://ieee.ee.psu.edu). The IEEE office is located in Room 222 Electrical Engineering East and the telephone number is 865-2393.

The Eta Kappa Nu Association (EE honor society) promotes scholarship and serves the EE students and Department through such activities as its tutoring program, open houses, and SRTE surveys. Founded in 1905, Penn State's Epsilon Chapter is the fifth oldest member of this international honor society for electrical engineering students. Membership is extended by invitation to EE majors ranked in the top fourth of their junior class or the top third of their senior class. Further information about Eta Kappa Nu can be obtained from its faculty adviser, Professor John D. Mitchell. To receive updated information on Eta Kappa Nu, you may browse their web page at: [http://www.ee.psu.edu/hkn/](http://www.ee.psu.edu/hkn/). The Eta Kappa Nu office is located in Room 222 Electrical Engineering East and the telephone number is 865-2393.

I. 4. **Laboratory Operations**

The BSEE curriculum contains six required EE laboratory courses, CMPEN (CSE) 275 (1 cr), EE 210 (4 cr), EE 310 (4 cr), EE 350 (4 cr), EE 316 (3 cr), and a choice of EE 402W or EE 403W (3 cr). Additional laboratory work is included in several of the senior elective courses.

Laboratory safety is important. You will be provided with a personal copy of our "Safety and Best Practices Manual".

The laboratory facilities for the required courses are located on the third floor of EE West, and are supervised from the stockroom. You are welcome to use these facilities when they are not scheduled for formal class work; a schedule of lab use is posted near the stockroom and includes some evening hours. Some test equipment is permanently located in each of the laboratory rooms, and additional instruments, test leads, and components may be signed out (with your I.D. card) for use in the labs areas.

For most labs, students are required to purchase components either from the Penn State Bookstore or the Department office and to possess a breadboard unit which facilitates the assembly and carryover of test circuits. More detailed information on laboratory operations is obtained in a document "The EE Stem Laboratories", obtainable from the EE stockroom, and in the detailed course outlines for each laboratory course.
I. 5. Financial Aid

The Department provides both merit and need-based scholarships for undergraduate students. Each summer a scholarship committee reviews student records for disbursement of scholarships to eligible recipients. Although you do not have to apply for these scholarships individually, you must file a free Application for Federal Student Aid through the Office of Student Aid, located in 314 Shields Building, to be considered for any of the need-based scholarships. Aid forms should be filed early in the spring semester. For more information on scholarships, please see the next section.

We also hire graders, lab assistants, lab operators and others on an hourly, wage-payroll basis. To be considered for these positions you will need to fill out an application with the EE department at the beginning of each semester.

For other financial aid information, (loans, etc.) please visit the PSU Financial Aid website at http://www.psu.edu/studentaid

I. 6. Scholarships

There are 2 types of undergraduate scholarships: Internal (where the money and selection process are controlled by PSU) and External (not controlled by PSU). In addition, there are graduate fellowships if you are considering graduate school.

Internal Scholarships
You do not need to apply for these. All EE students are automatically considered. At the end of the academic year, each department gets a list of students in descending order of GPA. We then have a committee that selects scholarship recipients based on this GPA information. For some of the scholarships, we also look at need, so if you have financial need, make sure that you have filled out the FAFSA form (see http://www.psu.edu/studentaid)

External Scholarships
Since these are not related to PSU, you are on your own. The PSU scholarship/fellowship office has compiled a list of some of the more prominent scholarships. Visit http://www.ufo.psu.edu for more information. You may also want to use the web to search for other external scholarships.

Graduate Fellowships
If you are considering graduate school, you should start looking for fellowship opportunities while you are still a Junior. As with undergraduate scholarships, the graduate fellowships are divided between internal and external fellowships. Obviously, the ones awarded by various schools depend on which graduate school you are interested in, so you need to contact the specific school. The Undergraduate Fellowship office has a list of some of the more prominent graduate fellowships. Visit http://www.ufo.psu.edu for more information.
I. 7. Academic Integrity

Recognizing not only the value of integrity in the academic environment, but also its value for the practicing engineer and for the society at large, we in the Department of Electrical Engineering urge you to act as a responsible professional while you are a student. Academic integrity is defined in senate rule 49-20 as follows:

Academic integrity is the pursuit of scholarly activity free from fraud and deception and it is an educational objective of this institution. Academic dishonesty includes, but is not limited to, cheating, plagiarizing, fabricating of information or citations, facilitating acts of academic dishonesty by others, having unauthorized possession of examinations, submitting work of another person or work previously used without informing the instructor, or tampering with the academic work of other students.

Each instructor should clarify specific standards for each course. But generally for any course, we can recognize attitude and behaviors that relate to integrity.

It is commonly accepted that people learn better if they can interact, discuss, and assist each other in solving problems and understanding concepts. Yet persons submitting identical homework papers overstep the bounds of beneficial interaction. A computer algorithm prepared by one person should not be used by another with only a name change. Clearly, professionals share ideas but they should not use other's work without clear acknowledgement of who did the work.

The issue of plagiarism is resolved for a student who has a sense of self-development in being a student. One learns to solve problems by solving problems. One learns to be independent by taking the initiative to seek out the background information needed to deal with a problem. Thus the student who comes to college with the intent of developing these personal skills and abilities will not be likely to have any difficulty in the realm of academic integrity. On the other hand, the student whose major goal is to get an easy degree as an entry to a well-paying job is developing habits that will lead to later job frustrations and poor performances.
II. DEGREE REQUIREMENTS FOR THE BSEE PROGRAM -- PROGRAM YEAR 2007

II. 1. Program Requirements Summary Chart

This chart is a suggested curriculum timetable. With careful planning you may arrange courses in many different ways. For example, the arts, humanities, and social sciences (AHS) may be moved to accommodate technical electives. However, when moving courses, be careful to meet all prerequisites.

**TOTAL PROGRAM CREDITS: 129**

♦ This course requires a grade of “C” or better for graduation from Electrical Engineering. The course should be repeated the next time offered if this condition is not satisfied.

% The related electives may include ROTC, co-op credits and other credits as specified on the list on pages 16-17. (SA/UN option is available only for co-op courses)

& EE technical electives are to be chosen from the list on page 15

@ The statistical elective is to be chosen from the list on page 16

♦ The engineering/science elective is to be chosen from the list on page 16

* Arts, Humanities, and Social Science Electives: see pages 17-18
II. 2. Course Descriptions and Prerequisites List

EE/CMPEN REQUIRED COURSES

EE 210 CIRCUITS AND DEVICES (4) (Grade of C or better required)
Introduction to electrical circuit analysis, electronic devices, and time-domain transient analysis. Prerequisite: PHYS 212. Prerequisite or concurrent: MATH 250.

EE 310 ELECTRONIC CIRCUIT DESIGN I (4) (Grade of C or better required)
Properties of fundamental electronic devices; analysis of DC, AC small-signal and nonlinear behavior; analog and digital circuit design applications. Prerequisite: EE 210.

EE 316 (formerly EE 324) INTRODUCTION TO EMBEDDED CONTROLLERS (3) (Grade of C or better required)
Introduction to microcontrollers in electronic and electromechanical systems. Hardware and software design for user/system interfaces, data acquisition, and control. Prerequisites: CMPSC 201, CMPEN 271. Prerequisite or concurrent: EE 310.

EE 330 ENGINEERING ELECTROMAGNETICS (4) (Grade of C or better required)
Static electric and magnetic fields; solutions to static field problems; Maxwell’s equations; electromagnetic wave boundary conditions; engineering applications. Prerequisites: EE 210, MATH 230.

EE 350 CONTINUOUS-TIME LINEAR SYSTEMS (4) (Grade of C or better required)
Introduction to continuous-time linear system theory; differential equation models, sinusoidal steady-state analysis, convolution, Laplace transform and Fourier analysis. Prerequisites: EE 210, MATH 220, MATH 250.

EE 402W SENIOR PROJECT DESIGN IN ELECTROMAGNETICS (3)
Project designs of antenna, microwave and optical systems, and computational methods in electromagnetics. Laboratory. Prerequisite: EE 330. Prerequisite or concurrent: ENGL 202C.

EE 403W SENIOR PROJECT DESIGN (3)
Project designs of analog and digital systems, interfacing, and relevant electronic circuits, with an emphasis on technical communications skills. Laboratory. Prerequisites: Completion of all core EE “C-or-better” courses (EE 210, 310, 330, 350, 316 and CMPEN 271), completion of two EE technical electives. Prerequisite or concurrent: ENGL 202C.

CMPEN 271 INTRODUCTION TO DIGITAL SYSTEMS (3) (Grade of C or better required)
Introduction to logic design and digital systems. Boolean algebra, and introduction to combinational and sequential circuit design and analysis. Concurrent: PHYS 212.

CMPEN 275 DIGITAL DESIGN LAB (1)
Introduction to digital design techniques. Note: At University Park, CMPEN 271/275 are taught as a single 4-credit course. Prerequisite or concurrent: CMPEN 271.

ESC 314 ENGINEERING APPLICATIONS OF MATERIALS (3) (Grade of C or better required)
Basic concepts of material structure and their relation to mechanical, electrical, magnetic, and optical properties, with engineering applications. Prerequisite: PHYS 212.
EE 311 ELECTRONIC CIRCUIT DESIGN II (3)
Electronic circuit design with consideration to single and multi-device subcircuits, frequency response characteristics, feedback, stability, efficiency, and IC techniques. Prerequisites: EE 310, EE 350.

EE 320 INTRODUCTION TO ELECTRO-OPTICAL ENGINEERING (3)
An introduction covering several fundamental areas of modern optics, optical processes, and devices. Prerequisite: EE 330.

EE 351 DISCRETE-TIME LINEAR SYSTEMS (3)
Introduction to discrete-time signal processing: sampling, linear time-invariant systems, discrete-time Fourier transform and discrete Fourier transform, Z transform. Prerequisite: EE 350.

EE 360 (formerly EE 367) COMMUNICATION SYSTEMS I (3)
Generic communication system; signal transmission; digital communication systems; amplitude modulation; angle modulation. Prerequisite: EE 350.

EE 362 (formerly EE 458) COMMUNICATION NETWORKS (3)
Data transmission, encoding, link control techniques; communication network architecture, design; computer communication system architecture, protocols. Prerequisites: CMPEN 271, STAT 401 or STAT 418.

EE 380 (formerly EE 428) LINEAR CONTROL SYSTEMS (3)
State variables; time-domain and frequency-domain design and analysis; design of feedback control systems; root locus. Course contains a significant laboratory component. Prerequisites: EE 350, MATH 220.

EE 387 (formerly EE 365) ENERGY CONVERSION (3)
Electromechanical energy conversion; magnetic circuits; transformers; transducers; commutators; synchronous, induction, and D.C. machines. Prerequisite: EE 350.

CMPEN 331 COMPUTER ORGANIZATION AND DESIGN (3)
Introduction to major components of a computer system, how they function together in executing a program, how they are designed. Course contains a significant programming component. Prerequisite: CMPSC 121 or CMPSC 201, CMPEN 271.

EE 410 (formerly EE 448) LINEAR ELECTRONIC DESIGN (3)
Linear circuit design via integrated circuit processes; A/D converters, switched capacitor filters, phase lock loops, multipliers, and voltage-controlled oscillators. Course contains a significant laboratory component. Prerequisite: EE 311.

EE 413 (formerly EE 423) POWER ELECTRONICS (3)
Switch-mode electrical power converters. Electrical characteristics and thermal limits of semiconductor switches. Course contains a significant laboratory component. Prerequisites: EE 310, EE 350.

EE 416 (CMPEN) (formerly EE 447) DIGITAL INTEGRATED CIRCUITS (3)
Analyses and design of digital integrated circuit building blocks, including logic gates, flip-flops, memory elements, analog switches, multiplexers, and converters. Course contains a significant laboratory component. Prerequisite: EE 310.
EE 417 (CMPEN) (formerly EE 478) DIGITAL DESIGN USING FIELD PROG. DEVICES (3)
Field programmable device architectures and technologies; rapid prototyping using top down design techniques; quick response systems. Prerequisite: CMPEN 331.

EE 420 ELECTRO OPTICS – PRINCIPLES AND DEVICES (3)
Spatially linear system and transform. Diffraction theory, partial coherence theory, optical image detection, storage and display, holography. Prerequisite: EE 320.

EE 421 (formerly EE 412) OPTICAL FIBER COMMUNICATIONS (3)
Operational principles of optical components, including sources, fibers and detectors, and the whole systems in optical fiber communications. Prerequisites: EE 350, EE 320, E SC 314.

EE 422 OPTICAL ENGINEERING LABORATORY (3)
Hands-on experience covering areas of optical transforms, electro-optics devices, signal processing, fiber optics transmission, and holography. Course contains a significant laboratory component. Prerequisite: EE 320.

EE 424 (formerly EE 414) PRINCIPLES AND APPLICATIONS OF LASERS (3)
Principles of lasers—generation, propagation, detection and modulation; applications in fiber optics communication, remote sensing, holography, optical switching and processing. Prerequisite: EE 330.

EE 430 (formerly EE 411) PRINCIPLES OF ELECTROMAGNETIC FIELDS (3)
Laws of electrodynamics, boundary value problems, relativistic effects, waves in dielectrics and ferrites, diffraction and equivalence theorems. Prerequisite: EE 330.

EE 432 UHF AND MICROWAVE ENGINEERING (3)
Transmission line and wave guide characteristics and components; design of UHF-microwave amplifiers, oscillators, and filters; measurement techniques; design projects. Course contains a significant laboratory component. Prerequisites: EE 330, EE 310.

EE 438 ANTENNA ENGINEERING (3)
Radiation from small antennas, linear antenna characteristics, arrays of antennas, impedance concepts and measurements, multifrequency antennas, and aperture antennas. Course contains a significant laboratory component. Prerequisite: EE 330.

EE 439 RADIOWAVE PROPAGATION IN COMMUNICATIONS (3)
Radiowave propagation in mobile, terrestrial, and satellite communications; applications at microwave and lower frequencies. Prerequisite: EE 330.

EE 441 (formerly EE 418) SEMICONDUCTOR INTEGRATED CIRCUIT TECHNOLOGY (3)
The fundamentals of device technology, including oxidation, diffusion, photoresist, metallization, epitaxy, and material preparation. Course contains a significant laboratory component. Prerequisites: EE 310, E SC 314.

E E 442 (formerly EE 419) SOLID STATE DEVICES (3)
The physics of semiconductors as related to the characteristics and design of solid state electronic devices. Prerequisites: EE 310, E SC 314.

EE 453 FUNDAMENTALS OF DIGITAL SIGNAL PROCESSING (3)
Design of FIR and IIR filters; DFT and its computation via FFT; applications of DFT; filter implementation, finite arithmetic effects. Course contains a significant laboratory component. Prerequisite: EE 351.
EE 454 (CMPSC) (formerly EE 486) FUNDAMENTALS OF COMPUTER VISION (3)
Introduction to topics such as image formation, segmentation, feature extraction, shape recovery, object recognition, and dynamic scene analysis. Course contains a significant programming component. Prerequisites: MATH 230, CMPSC 201 or CMPSC 121.

EE 455 (CMPEN) (formerly EE 485) AN INTRODUCTION TO DIGITAL IMAGE PROCESSING (3)
Overview of digital image processing techniques and their applications; image sampling, enhancement, restoration, and analysis; computer projects. Course contains a significant programming component. Prerequisites: CMPSC 201 or CMPSC 121, EE 350.

EE 456 (ESC)(EGEE) ARTIFICIAL NEURAL NETWORKS (3)
Artificial Neural Networks as a solving tool for difficult problems for which conventional methods are not available. Course contains a significant programming component. Prerequisites: CMPSC 201 or CMPSC 121, MATH 220.

EE 460 (formerly EE 459) COMMUNICATION SYSTEMS II (3)
Probability fundamentals, digital/analog modulation/demodulation, system noise analysis, SSNR and BER calculations, optimal receiver design concepts, introductory information theory. Prerequisite: EE 360.

EE 471 (AERSP)(NUC E) (formerly EE 490) INTRODUCTION TO PLASMAS (3)
Plasma oscillations; collisional phenomena; transport properties; orbit theory, typical electric discharge phenomena. Prerequisite: EE 330.

EE 472 (AERSP) (formerly EE 492) SPACE ASTRONOMY & INTRO TO SPACE SCIENCE (3)
The physical nature of the objects in the solar system; the earth's atmosphere, ionosphere, radiation belts, magnetosphere, and orbital mechanics. Prerequisite: EE 330.

EE 474 SATELLITE COMMUNICATIONS (3)
Overview of satellite communications systems, principles, space platforms, orbital mechanics, up/down links and link budgets, modulation techniques. Prerequisite: EE 330, EE 360.

EE 477 (METEO) (formerly EE 433) FUNDAMENTALS OF REMOTE SENSING (3)
The review of fundamental physical properties leads into discussions of various techniques, including imaging, spectroscopy, radiometry, and active sensing. Prerequisite: EE 330.

EE 482 (formerly EE 429) INTRODUCTION TO DIGITAL CONTROL SYSTEMS (3)
Sampling and hold operations; A/D and D/A conversions; modeling of digital systems; response evaluation; stability; basis of digital control; examples. Course contains a significant laboratory component. Prerequisites: EE 380, EE 351.

EE 487 ELECTRIC MACHINERY AND DRIVES (3)
Analysis of variable-speed drives comprised of AC electric machines, power converters, and control systems. Course contains a significant laboratory component. Prerequisite: EE 387.

EE 488 (formerly EE 461) POWER SYSTEMS ANALYSIS I (3)
Fundamentals, power transformers, transmission lines, power flow, fault calculations, power system controls. Prerequisite: EE 387.

CMPEN 411 (formerly CSE 477) VLSI DIGITAL CIRCUITS (3)
Digital integrated circuit device design, layout, masking, simulation, and fabrication; VLSI design techniques and system architecture; computer-aided design and interactive graphics. Course contains a significant programming component. Prerequisites: CMPEN 471, EE 310.
CMPEN 431 INTRODUCTION TO COMPUTER ARCHITECTURE (3)
Principles of computer architecture: memory hierarchies and design, I/O organization and design, CPU design and advanced processors. Course contains significant programming component. Prerequisite: CMPEN 331.

CMPEN 471 LOGICAL DESIGN OF DIGITAL SYSTEMS (3)
Basic switching theory and design of digital circuits, including combinational, synchronous sequential, and asynchronous sequential circuits. Prerequisite: CMPEN 331.

Electrical Engineering Departmental Statement on Prerequisites

The Electrical Engineering Department takes course prerequisites very seriously. The EE core courses and subsequent electives are highly inter-related, as indicated in the numerous prerequisites listed for the various courses. For this reason, students are expected to successfully master material in prerequisite courses before attempting any follow-up courses that build on this material. Note: In the case of courses that require a "C" to graduate, successful mastery of the material means earning a "C" or better, not merely passing the course.

Student responsibilities regarding prerequisites:

1. Students are expected to be aware of and abide by the prerequisites for each class. The course prerequisites will be clearly indicated on the course syllabus.
2. If a student does not earn a required grade in a course (which is a "C" or better in the case of most core courses):
   a. the student is expected to retake the course immediately (the next semester that it is available).
   b. the student is expected to remove from his/her schedule any course which has the course in question as a prerequisite.
3. Students who (knowingly or unknowingly) violate prerequisites in an EE class will be notified of this violation during the first 2 class periods. The student is then required to immediately remove the course from his/her schedule.

If a student does not fix the prerequisite problem as required, he/she will be disenrolled from the violating course by the Electrical Engineering Department and be notified of such action. This action will be done during the drop/add period so as to give the student plenty of time to find a replacement course. This action is allowed under Faculty Senate Policy 34-60.

II. 3. Selection of EE Technical Electives &
The five technical electives may be chosen from the following lists. At least 6 of the 15 credits required for the technical electives must be EE. Choose only courses for which you have prerequisites. Many of these courses are offered only one time a year, so plan carefully to achieve your objectives. You may replace up to 3 credits of a 400-level technical elective with courses 494H (Honors Thesis), and 497 (special topics) that are directed by members of the Department faculty.

300-Level EE/CMPEN Technical Electives (3 – 6 credits required)

II. 4. **Selection of Engineering/Science Technical Elective**

This 3 credit course should be chosen from the following:
- Any course from the EE/CMPEN technical elective list
- CMPSC 122, CMPSC 221 or any 400-level CMPSC course
- Any 400-level CMPEN course except CMPEN 472, CMPEN 473
- E SC 312, E SC 313 or any 400-level E SC course except E SC 400H
- Any course from I E except I E 452
- Any course from M E except M E 445, 455, 462
- Any course from NUC E except NUC E 445
- Any course from A B E, A E, AERSP, ACS, BIOE, CHEM E, C E, E MCH
- Any 400-level ASTRO course
- BIOL 141 or any 400-level BIOL course
- Any CHEM course beyond CHEM 110 except CHEM 400
- Any 400-level EGEE course
- Any 400-level MATH course except MATH 470, 471, 475
- Any 400-level MATSE course
- METEO 300 or any 400-level METEO course
- Any 400-level MNG course
- Any 400-level P N G course
- PHYS 237 and any 400-level PHYS course except PHYS 400, 401, 402, 444, 457, 458
- Any 400-level STAT course not being used to meet the Statistics elective requirement (STAT 414 and STAT 418 cannot both be taken for credit)

II. 5. **Selection of Statistics Elective**

Take one 3-credit statistics course from the following list:
- **STAT 418** - Probability - standard statistics elective for most EE students. If you are contemplating going to Graduate School, particularly in areas such as control, signal processing, or communications, than you should definitely take this statistics elective.
- **STAT 401** - Experimental Methods – less rigorous alternative to STAT 418 for students with no Graduate School aspirations.
- **IE 424** - Process Quality Engineering - for students interested in industrial applications.
- **STAT 414** - Probability Theory - similar to STAT 418 but with more emphasis on theory
- **PHYS 410** - Quantum Mechanics - for students interested in device physics.

II. 6. **Selection of Related Electives**

The Related elective is a 6-credit requirement aimed at broadening the knowledge base of our students through additional EE technical electives or courses in some other field that complements the EE Degree, or through professional development. There are numerous ways that this elective can be satisfied – additional technical courses, non-technical Engineering courses (leadership, green Engineering, etc.), business courses, language courses, minor courses, ROTC credits, or Co-operative Education credits.

These 6 credits are to be selected from the following:
- Any course from the EE Technical Elective lists (300 or 400 level)
- Any course from the Engineering/Science Technical Elective list
- Any EE 496 course
- Any Engineering leadership, entrepreneurship, ethics, or Green Engineering course
- Co-op credit (ENGR 295, 395, 495)
- ROTC credit (only if you complete the ROTC program)
- Any 2-course business or foreign language sequence
- Any course that is used for the completion of a minor

**Note:** Any courses not listed here require prior approval of the EE Program Coordinator.
COURSES NOT ALLOWED TO MEET ANY GRADUATION REQUIREMENTS:

Remedial courses, 2-year and 4-year technology degree courses, and courses that closely resemble other courses taken cannot be used to meet graduation requirements in the BSEE program. This list includes, but is not necessarily limited to, the following courses:

- All engineering tech courses (EE T, ME T etc.)
- All CHEM below 110
- EE 211, 212, 353
- E SC below 300 level
- All EES&E courses
- English 004, 005
- ENGR 195 (Internship Credit)
- I E 452
- MATH 001-111, 200, 318-319, 470, 471, 475
- ME 445, 455, 462
- NUC E 445
- All PH SC courses
- PHYS 001-200, 215, 255-400, 401, 402, 444, 457, 458
- All PL ET courses
- RCLED 010, 005
- All SC courses
- All SC&T courses
- SPCOM 126

IF THERE IS ANY QUESTION ABOUT WHETHER A COURSE CAN MEET GRADUATION REQUIREMENTS, CONTACT THE E E PROGRAM COORDINATOR.

II. 7. Selection of General Education AHS Electives

(Arts, Humanities, Social Sciences & Diversity Courses)

All PSU students are required to take 18 credits of Arts (GA), Humanities (GH), and Social and Behavioral Science (GS) courses (AHS courses). Normally, these 18 credits are distributed so that students take 6 credits in each of the 3 areas. For engineering students, 3 of the 6 GS credits must be either Econ 002 or Econ 004.

In addition, all PSU students must take at least one 3-credit Intercultural and International Competence (GI) course. Note that these GI courses have recently been split into 2 categories – United States Cultures (US) and International Cultures (IL). The GI designation no longer exists. Courses with either the US or IL designation will satisfy the old GI requirement. If you took or will take a US/IL course and it doesn’t show up as satisfying the GI requirement on your degree audit, please submit a petition to the EE Office so that we can manually make the substitution.

A list of acceptable GA, GH, GS and US/IL courses is available at: http://www.psu.edu/bulletins/bluebook/gened.
Exceptions That Require Department Petitions

From time to time, students request exceptions to these requirements. Any petition should be accompanied by a complete list of all courses you have taken and will take in this group, including the exception. **YOUR PETITION MUST BE FILED PRIOR TO THE SEMESTER WHEN YOU PLAN TO GRADUATE.** Petition forms are available in the main lobby of the EE Academic Affairs office.

1. **3-6-9 option:** Students may complete the 18 AHS credits in an unbalanced way (e.g. 3 credits of GH, 6 credits of GS, 9 credits of GA). The student needs to submit a petition to the EE Department in which they specify how they will redistribute the 18 credits. **Note that students may only redistribute 3 credits.**

2. **Foreign Language option:** Students who have earned credit for a level 3 (or higher) foreign language (e.g. Spanish 3, French 3) may use 3 credits of this language to count towards any one of the groups above (GA, GH, or GS). The student needs to submit a petition to the EE Department in which they specify which category (GA, GH, or GS) for which the language is being used.

3. **Any course that does not carry the GA, GH, or GS general education label, including courses offered at other universities,** must be petitioned through the EE Department.

The following table may be used to assist you in planning your AHS courses. Note that either ECON 002 or 004 is required for graduation and counts as a GS elective.

<table>
<thead>
<tr>
<th>GA</th>
<th>GA</th>
<th>GH</th>
<th>GH</th>
<th>GS</th>
<th>GS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>ECON 2 or 4</td>
<td></td>
</tr>
</tbody>
</table>

**Please note: At least one of these courses must be a US/IL cultures course (previously called GI).**

**Total of 18 credits needed to satisfy AHS requirements***
II. 8. **Transfer Student Degree Requirements**

Transfer students are defined as:

- Students transferring from other PSU majors
- Advanced Standing students transferring from another university
- 3-2 Program students

Students transferring into the BSEE program from another program (either at PSU or elsewhere) need to be extra careful about graduation requirements. The courses that you need to graduate will vary from student to student. You **must** meet with the Electrical Engineering Undergraduate Program Coordinator, Mr. David Salvia, upon acceptance into the EE program to determine what courses are still needed for graduation. **Failure to do so may lead to improper course selection and subsequent delay in your graduation.**

II. 9. **Schreyer Honors College Degree Requirements**

Students in the Schreyer Honors College can have certain graduation requirements waived/substituted with the support of their honors adviser, if they can show that the change(s) is (are) in the best interest of their overall academic plan. Honors students are assigned an honors adviser when they are first accepted into the honors program. Honors advisers in the EE Department are Professors Lynn Carpenter, William Higgins, Thomas Jackson, Timothy Kane and John Mitchell.

Participation is by invitation only and continuation in the honors program depends upon the meeting of program standards. Enrollment in H sections of courses is limited to people in this program.

II. 10. **Petitions and Special Needs**

Any exceptions made to the degree requirements set forth in this section must be approved and documented by the authorized persons, often through the use of College petition forms. **You must file petitions before your last semester!** Generally speaking, any problem you may have should be brought to the attention of the Office of Academic Affairs. If we can't help you, we can find out whom you should see. Some requests we can handle, some go to the Dean, and some go to the Senate. We can make referrals regarding personal as well as academic problems. Some phone numbers representing typical referrals are given inside the front cover.

II. 11. **Degree Audits**

As you progress through the requirements for your degree, you should check periodically to be sure that your course selections will satisfy the degree requirements. At any time, you may make an appointment with Gabi Rhinehart, the *Undergraduate Program Staff Assistant*, Room 115 E E East, in the Office of Academic Affairs to review (audit) your record. Following each semester we receive computer-printed summaries (Degree Audits) of courses you have completed, and we can provide you with a copy. You can also obtain an updated copy directly on-line by visiting **http://elion.oas.psu.edu**. Please be aware, however, that these computer-generated degree audits may not necessarily reflect petitions/exceptions that have recently
been approved by the EE Department. If you have any questions about your audit form, please contact Gabi Rhinehart, the Undergraduate Program Staff Assistant.

The semester before you graduate, you should make an appointment to meet with Gabi Rhinehart, the Undergraduate Program Staff Assistant in 115 E E East (865-7272) for a final senior audit. You may write (gbr6@psu.edu) or call her for an appointment.

Though we will help as much as we can, we cannot accept responsibility for your decisions. Senate rules state that the student has the final responsibility for selecting courses and meeting degree requirements.
Penn State provides many sources of advising of many different types. To some extent, you need to select an adviser depending on the type of advice being sought. Yet it is also valuable to have one adviser who helps put issues in perspective. Different people have different needs so we recommend that you shop for some combination that suits you.

Students often seek advice about many things not necessarily related to the Department, and problems with grades are seldom tied to lack of ability, but usually to some personal matter. For that reason we provide you with a partial list of University facilities as shown on the inside of the back cover of this booklet. We also make reference here to the Career Development and Placement Service in the MBNA Career Center that provides many services in addition to setting up interviews.

Within the Department we provide several advising services that are described in more detail in the following sections. These include routine inquiries for information that are often handled by the office staff, reviews of progress toward a degree that are conducted in the office by appointment, discussions about career goals and related issues, and assistance with problems.

III. 1. Faculty Advisers

Prof. David Salvia, the Undergraduate Program Coordinator, will be available to assist you with short- or long-term schedule planning, assistance with selection of EE electives, guidance in handling academic problems, help with adding/dropping/changing courses, and job placement information. Prof. Salvia is located within the Academic Affairs Office in Room 114 E E East.

You are welcome to ask him such questions as:

-- How heavy a load should I take?
-- Should I specialize or should I take electives in several areas?
-- Is it worthwhile to obtain a minor and in what area?
-- Which courses provide a good preparation for graduate study?
-- Will certain courses be of special interest to prospective employers?

Looking ahead to graduation, you may have questions such as:

-- When should I start interviewing?
-- How many should I interview and how do I prepare?
-- Does a particular technology have a strong future?
-- Where can I learn about opportunities for continuing education?

Faculty teaching courses will also set up hours for consultation. They will be very knowledgeable about courses and career opportunities in their areas of specialization. They can help you sort out electives and expand upon the brief notes in the next section that describe technical interest areas.

Students in the University Scholars Program are assigned an academic adviser who they should meet with regularly to plan their courses and thesis work.
III. 2. **Choosing Areas of Specialization**

The BSEE program allows students to informally choose an area of specialization by selecting technical electives in a structured way. Students are not required to officially select an area of specialization when selecting their technical electives, however.

The following pages identify which courses relate to each general technical interest area (shown below). Some of you may wish to specialize in an area, but there have been many cases where people who specialize in one area find a job in another. Especially for the undergraduate, we recommend a sampling of two or three areas because professional careers often move in unexpected directions.

**AREAS OF SPECIALIZATION WITHIN ELECTRICAL ENGINEERING**

COMMUNICATIONS

Overview
The transmission of information in a fast, reliable, and secure way is a necessity in the world that we live in. Study in communications involves the analysis and design of information transmission systems. Principles such as different modulation schemes (such as AM and FM), noise suppression, various transmission media and computer networking are discussed in detail. Different examples of some communications systems include radio, television, the telephone system, computer networks, GPS satellite systems, and microwave transmission lines.

Pertinent Required Courses
- EE 350 -- Continuous-time Linear Systems
- EE 330 -- Engineering Electromagnetics
- A statistics course (STAT 418 recommended)

Suggested Electives
Because communications is such a broad-based industry, we can identify several technical specialties that are relevant. It is probably not feasible to take all of the communications-related courses, due to the sheer number of courses available. Rather, students need to decide on which aspect(s) of communications to focus.

First, we include the communication theory courses that focus on systems aspects of communications:

- EE 360 – Communication Systems I: a junior-level elective which provides a broad introduction to both analog and digital communication systems and modulation schemes
- EE 362 – Communication Networks: studies data encoding, network architecture, and the routing of data streams, which are important in the computer communication industry
- EE 460 – Communication Systems II: a follow-up to EE 360 which focuses on the design of communication systems in the presence of noise and the corresponding statistics-based theoretical analysis

Next, we may identify those courses that deal with the transmission of communication signals:

- EE 421 -- Optical Fiber Communications: a follow-up to EE 320 which provides students with a fundamental understanding of the operation of fiber optic systems, including transmitters, receivers, as well as the fibers themselves
- EE 432 -- UHF and Microwave Engineering: discusses the analysis and design of microwave transmission lines, amplifiers and filters, which are key elements in many communications systems
- EE 438 -- Antenna Engineering: analysis and design of many types of antennas, with laboratory work in AM/FM antenna and array design
- EE 439 -- Radio Wave Propagation: a theoretical and practical treatment of how radio waves are affected by earth, atmosphere and buildings during the transmission process
• **EE 474 -- Satellite Communications**: a follow-up to EE 360 which provides an overview of satellite communication systems, including modulation schemes, satellite components, satellite link design and orbital mechanics

*Other courses that are tangentially related to communications are the following:*
• **EE 424 -- Lasers: Principles and Applications**: a follow-up to EE 320 covering the operation of lasers as well as applications such as optical signal processing, holography, spectroscopy, remote sensing (LIDAR), and optical communications
• **EE 351 -- Discrete-time Systems**: a junior-level elective follow-up to EE 350 which provides a mathematical foundation for subsequent study in digital signal processing, digital control systems, and image processing
• **EE 453 -- Digital Signal Processing**: a follow-up to EE 351 that covers both the theory and application of DSP, including A/D and D/A conversion, digital filter design, and implementation of the Discrete Fourier Transform via the Fast Fourier Transform algorithm

**COMPUTER HARDWARE**

*Overview*
With the proliferation of digital electronics, most electrical engineering systems will include computer hardware as an integral part of the system. Computer hardware courses are equally split between the Electrical Engineering and Computer Engineering majors. These courses are generally accessible to EE students who have no advanced software courses.

*Pertinent Required Courses*
• **CMPEN 271 -- Introduction to Digital Systems**
• **CMPEN 275 -- Digital Design Laboratory**
• **EE 316 -- Embedded Microcontrollers**

*Suggested Electives*
• **EE 362 -- Communication Networks**: studies data encoding, network architecture, and the routing of data streams, which are important in the computer communication industry
• **EE 416 -- Digital Integrated Circuits**: looks at the design of digital integrated circuit building blocks such as logic gates, memory elements, flip-flops, and multiplexers at the discrete component level
• **EE 417 -- Field Programmable Devices**: a digital hardware course that teaches the fundamentals of programmable gate arrays (PGA’s) and the VHDL programming language
• **CMPEN 331 -- Computer Organization and Design**: a junior-level introduction to computer architecture which discusses how the microprocessor, memory, I/O, etc. interact with each other.
• **CMPEN 411 -- VLSI Digital Circuits**: a follow-up to CMPEN 471 which provides an exposure to the fabrication and layout of Very Large Scale Integration (VLSI) circuits
• **CMPEN 431 -- Introduction to Computer Architecture**: a follow-up to CMPEN 331 which deals more with design issues in computer architecture
• **CMPEN 471 -- Logical Design of Digital Systems**: a follow-up to CMPEN 271 which discusses the design of sequential circuits and other switching theory topics
COMPUTER SOFTWARE

Overview
Like computer hardware, computer software is used, to some extent, by almost all electrical engineers. Many EE courses use specialty software packages to assist in the analysis/design of various electrical engineering systems. In addition, however, courses SPECIFICALLY related to computer software are available. For the most part, these courses are taught by the Computer Science and Engineering (CSE) Department, for Computer Science and Computer Engineering majors. EE students, however, are allowed to take these courses on a space available basis.

Computer software courses can be divided into 2 areas -- programming courses and applications courses. Electrical Engineering students will generally be able to take the applications courses only with prior study of intermediate or advanced programming courses. Programming experience in itself is not a sufficient prerequisite.

Pertinent Required Courses
• CMPSC 201 -- Computer Programming for Engineers Using C

Suggested Electives
General Programming Courses (NOTE: These courses DO NOT count as EE technical electives. They count only as ENGINEERING electives or RELATED electives):
• CMPSC 122 -- Intermediate Programming: a follow-up to CMPSC 201 which teaches C++
• CMPSC 221 -- Object-oriented Programming: a follow-up to CMPSC 122 that teaches web-based programming using JAVA
• CMPSC 311 -- Introduction to System Programming: a follow-up to CMPSC 221 which focuses on operating system (UNIX) level programming
• CMPSC 442 -- Introduction to Artificial Intelligence: a follow-up to CMPSC 122 which covers the theory, implementation, and application of artificial intelligence
• CMPSC 450 -- Concurrent Scientific Programming: a follow-up to CMPSC 201 which teaches the solution to problems encountered with synchronization and concurrent execution in distributed systems
• CMPSC 451 -- Numerical Computations: covers algorithm development for Fourier Transforms, interpolation, numerical integration, differential equation solutions, etc.
• CMPSC 455 -- Introduction to Numerical Analysis: similar to CMPSC 451 but a bit more mathematical. Students can NOT take both CMPSC 451 and CMPSC 455 for credit

Programming Application Courses (NOTE: These courses DO count as EE technical electives):
• EE 454 -- Fundamentals of Computer Vision: a follow-up to CMPSC 122 which discussed topics such as object recognition, feature extraction from an image, and dynamic image analysis
• EE 455 -- Digital Image Processing: overview of image processing techniques and applications such as image enhancement and restoration
• EE 456 -- Introduction to Neural Networks: theoretical understanding of artificial neural networks and practical treatment of neural network programming with applications such as character recognition
CONTROL SYSTEMS

Overview
Control systems are encountered every day, from temperature/climate control systems in buildings to navigational control systems in vehicles. Control systems are also an integral part of any manufacturing process -- electronics are used to monitor and regulate assembly lines. A control systems specialization provides students with the necessary mathematical and computer programming background to analyze and design both analog and digital control systems. Associated lab work helps illustrate the control algorithms learned in the classes.

One sub-category of control systems is robotics. At Penn State, robotics is covered more in industrial or mechanical engineering. However, a controls background, in addition to courses in SIGNAL AND IMAGE PROCESSING, provides students with many of the fundamentals needed for future work in robotics.

Pertinent Required Courses
- EE 350 -- Continuous-time Linear Systems
- EE 316 -- Embedded Microcontrollers
- A statistics course (STAT 418 recommended)

Suggested Electives
Basic control theory is covered in a 2-course sequence (EE 380/482) following junior-level linear systems courses which provide the mathematical background (EE 350/351):
- EE 351 -- Discrete-time Systems: a junior-level elective follow-up to EE 350 which provides a mathematical foundation for subsequent study in digital signal processing, digital control systems, and image processing
- EE 380 -- Linear Control Systems: introductory course, with lab, which provides a theoretical and practical overview of classical analog control methods such as PID control and lag-lead control
- EE 482 -- Digital Control Systems: a follow-up to both EE 351 and EE 380 which focuses on modern digital control techniques and the corresponding A/D conversion

Other courses that are tangentially related to control systems are the following:
- EE 387 -- Energy Conversion: modeling and analysis of motors and generators, electromechanical energy conversion machines that are integral parts of industrial applications and other control systems
- EE 413 -- Power Electronics: studies high-power semiconductors that interface with mechanical systems or convert electric power between different forms
- EE 454 -- Fundamentals of Computer Vision: discusses topics such as object recognition, feature extraction from an image, and dynamic image analysis
- ME/IE 456 -- Industrial Robot Applications: introduction to robots, with an emphasis on robot selection, programming, and economic justification for manufacturing applications

(Note #1: This course has prerequisites that are not normally taken by EE majors.)
(Note #2: This course counts as an ENGINEERING elective, not an EE technical elective.)
ELECTROMAGNETICS

Overview
There are many applications of electromagnetics within the electrical engineering field. This area is good for students pursuing careers in antenna design, microwave communications, and in the study of wave propagation. Throughout this area, there is a strong emphasis on Maxwell's equations, Faraday's laws, and wave phenomena, which are often understood much more easily when time varying visual simulations replace equations and static diagrams.

Pertinent Required Courses
- EE 330 -- Engineering Electromagnetics

Suggested Electives
- EE 430 -- Principles of Electromagnetic Fields: a follow-up to EE 330 which discussed E/M in theoretical detail, along with applications such as transmission lines, wave guides, and signal propagation
- EE 432 -- UHF and Microwave Engineering: discusses the analysis and design of microwave transmission lines, amplifiers and filters, which are key elements in many communications systems
- EE 438 -- Antenna Engineering: analysis and design of many types of antennas, with laboratory work in AM/FM antenna and array design
- EE 439 -- Radio Wave Propagation: a theoretical and practical treatment of how radio waves are affected by the earth, atmosphere and buildings during the transmission process
- EE 471 -- Introduction to Plasmas: gives students a basic introduction to electromagnetic properties of plasmas, primarily in astrophysical and geophysical contexts
- EE 477 -- Fundamentals of Remote Sensing: studies various techniques for atmospheric measuring using both radio frequency approaches (RADAR, radiometry) and optical approaches (LIDAR -- laser radar, spectroscopy)

ELECTRONIC DESIGN

Overview
Although almost every electrical engineering sub-discipline uses electronics to some extent, the term electronic design is generally understood to mean the assembly of basic electronic components to accomplish some fundamental task that is replicated many times over in a practical system. The field of electronic design ranges from the basic design of IC's using discrete semiconductor devices to the fabrication of complex circuits on a single IC chip using VLSI techniques.

Pertinent Required Courses
- EE 210 -- Circuits and Devices
- EE 310 -- Electronic Circuit Design I
- EE 316 -- Embedded Microcontrollers
- CMPEN 271 -- Introduction to Digital Systems
- CMPEN 275 -- Digital Design Laboratory
Suggested Electives

- **EE 311 -- Electronic Circuit Design II**: a follow-up to EE 310 which focuses on multi-stage amplifier design, feedback, and frequency response characteristics of electronic circuits
- **EE 410 -- Analog Integrated Circuits**: looks at the design of analog integrated circuit building blocks such as operational amplifiers, voltage regulators, current sources, and amplifiers
- **EE 413 -- Power Electronics**: studies high-power semiconductors that interface with mechanical systems or convert electric power between different forms
- **EE 416 -- Digital Integrated Circuits**: looks at the design of digital integrated circuit building blocks such as logic gates, memory elements, flip-flops, and multiplexers at the discrete component level
- **EE 417 – Field Programmable Devices**: a digital hardware course that teaches the fundamentals of programmable gate arrays (PGA’s) and the VHDL programming language
- **CMPEN 411 -- VLSI Digital Circuits**: a follow-up to CMPEN 471 which provides an exposure to the fabrication and layout of Very Large Scale Integration (VLSI) circuits
- **CMPEN 471 -- Logical Design of Digital Systems**: a follow-up to CMPEN 271 which discusses the design of sequential circuits and other switching theory topics

Other courses that are tangentially related to electronic design are:

- **EE 441 -- Semiconductor Integrated Circuit Technology**: a practical study of the fabrication of MOS integrated circuits, with a strong laboratory component in which students become familiar with clean room equipment
- **EE 442 -- Solid State Devices**: a follow-up to E SCI 314 which focuses on the physics of semiconductors and the modeling/design of various semiconductors using BJT, JFET, CMOS, NMOS, and BiCMOS technologies
- **EE 432 -- UHF and Microwave Engineering**: discusses the analysis and design of microwave transmission lines, amplifiers and filters, which are key elements in many communications systems
- **IE 464 – Assembly of Printed Circuit Boards**: this lab-oriented course, which deals with the manufacturing aspects of electronics, is a good complement to the theoretical EE electronics courses

GRAD SCHOOL PREPARATION

Overview
Unless you know exactly what you are going to do in graduate study, the recommended strategy for an undergraduate intending to study beyond the baccalaureate level is to take a series of foundation courses covering several different areas of technology. Specialization can then come at the graduate level. Two reasons for doing this are 1) most graduate programs have some sort of breadth requirement which requires technical courses in multiple sub-disciplines of electrical engineering and 2) exposing yourself to many facets of electrical engineering as an undergraduate may help you decide WHAT to specialize in during your graduate program.

Pertinent Required Course
It is strongly recommended that you take STAT 418 as your statistics elective if you are contemplating graduate study.
Suggested Electives

- **EE 380 -- Linear Control Systems**: introductory course, with lab, which provides a theoretical and practical overview of classical analog control methods such as PID control and lag-lead control.
- **EE 420 -- Electro-optics: Principles and Devices**: a follow-up to EE 320 that covers the topics more in-depth, with an emphasis on holography.
- **EE 430 -- Principles of Electromagnetic Fields**: a follow-up to EE 330 which discussed E/M in theoretical detail, along with applications such as transmission lines, wave guides, and signal propagation.
- **EE 442 -- Solid State Devices**: a follow-up to E SCI 314 which focuses on the physics of semiconductors and the modeling/design of various semiconductors using BJT, JFET, CMOS, NMOS, and BiCMOS technologies.
- **EE 453 -- Digital Signal Processing**: a follow-up to EE 351 that covers both the theory and application of DSP, including A/D and D/A conversion, digital filter design, and implementation of the Discrete Fourier Transform via the Fast Fourier Transform algorithm.
- **EE 460 -- Communication Systems II**: a follow-up to EE 360 which focuses on the design of communication systems in the presence of noise and the corresponding statistics-based theoretical analysis.
- Other courses that are listed in the Graduate Bulletin as prerequisites for 500-level courses.

**OPTICS**

**Overview**

Optical systems have become increasingly popular for manipulating information (optical signal processing), transmitting information (fiber optics), and remote measurement of electrical properties (LIDAR). Furthermore, electro-optical devices, such as liquid crystal displays (LCDs) are a mainstay in high-tech electronic gadgets and laptop computers. The broad field of optics provides students with knowledge about the many building blocks within an optical system.

**Pertinent Required Courses**

- **EE 330 -- Engineering Electromagnetics**
- **E SCI 314 -- Engineering Applications of Materials**

**Suggested Electives**

- **EE 320 -- Introduction to Electro-optical Engineering**: an introductory course in optics/electro-optics which covers lenses, mirrors, polarization, lasers, diffraction, wave motion, and geometric optics.
- **EE 420 -- Electro-optics: Principles and Devices**: a follow-up to EE 320 that covers the topics more in-depth, with an emphasis on holography.
- **EE 421 -- Optical Fiber Communications**: a follow-up to EE 320 which provides students with a fundamental understanding of the operation of fiber optic systems, including transmitters, receivers, as well as the fibers themselves.
- **EE 422 -- Optical Engineering Laboratory**: a laboratory-oriented follow-up to EE 320 providing students with hands-on exposure to lenses, lasers, diffraction, holograms, and other optical devices.
• EE 424 -- Lasers: Principles and Applications: a follow-up to EE 320 covering the operation of lasers as well as applications such as optical signal processing, holography, spectroscopy, remote sensing (LIDAR), and optical communications

Other courses that are tangentially related to optics are the following:
• EE 477 -- Fundamentals of Remote Sensing: studies various techniques for atmospheric measuring using both radio frequency approaches (RADAR, radiometry) and optical approaches (LIDAR -- laser, radar, spectroscopy)

POWER SYSTEMS

Overview
Once the bread and butter of electrical engineering, the power systems field deals with the generation of electrical power on both the large scale and small scale. Large-scale power system study involves the understanding of how power is generated at the power plant and then transmitted to homes, businesses, and factories. On the smaller scale, power systems studies motors and generators, which convert energy from electrical to mechanical form and vice versa, and the associated power electronics

Pertinent Required Courses
• EE 210 -- Circuits and Devices
• EE 310 -- Electronic Circuit Design I
• EE 350 -- Continuous-time Linear Systems

Suggested Electives
• EE 387 -- Energy Conversion: modeling and analysis of motors and generators, electromechanical energy conversion machines that are integral parts of industrial applications and other control systems
• EE 413 -- Power Electronics: studies high-power semiconductors that interface with mechanical systems or convert electric power between different forms
• EE 487 -- Electric Machinery and Drives: builds on EE 387 by discussing machinery that is used for industrial automation
• EE 488 -- Power Systems Analysis I: an overview of the entire power system process: transformers, transmission lines, power system control, power flow, stability

Other courses that are tangentially related to power systems are the following:
• any course in CONTROL SYSTEMS
• A E 311 -- Fundamentals of Electrical and Illumination Systems for Building: a fundamental coverage of electrical and illumination systems in modern buildings
• A E 456 -- Solar Energy Building System Design: teaches analysis and design of solar radiation collection systems
• NUC E 401 – Solar Energy Building Design: teaches analysis and design of solar radiation/collection systems
SEMICONDUCTOR DEVICES

Overview
Because semiconductors are the active components inside nearly all modern electronic devices, all advances in electronics ultimately come down to making better semiconductor devices and understanding how they work. Silicon is the basic ingredient in most devices and the primary material studied at the undergraduate level, though the principles are easily extended to other materials.

Pertinent Required Courses
• EE 210 -- Circuits and Devices
• EE 310 -- Electronic Circuit Design I
• E SCI 314 -- Engineering Applications of Materials

Suggested Electives
• EE 441 -- Semiconductor Integrated Circuit Technology: a practical study of the fabrication of MOS integrated circuits, with a strong laboratory component in which students become familiar with clean room equipment
• EE 442 -- Solid State Devices: a follow-up to E SCI 314 which focuses on the physics of semiconductors and the modeling/design of various semiconductors using BJT, JFET, CMOS, NMOS, and BiCMOS technologies
• CMPEN 411 -- VLSI Digital Circuits: a follow-up to CMPEN 471 which provides an exposure to the fabrication and layout of Very Large Scale Integration (VLSI) circuits

Other courses that are tangentially related to semiconductor devices are the following:
• any course in ELECTRONIC DESIGN
• IE 464 – Assembly of Printed Circuit Boards: this lab-oriented course, which deals with the manufacturing aspects of electronics, is a good complement to the theoretical EE electronics courses

SIGNAL & IMAGE PROCESSING

Overview
Signals -- both 1-D signals such as speech and audio signals, and 2-D signals such as images and video signals -- represent information. Processing these signals means extracting certain parameters from that information, filtering it to remove undesired components, coding it for efficient transmission, or many other operations. Because digital technology supports extensive manipulation and interpretation of signal/image data, signal processing is increasingly becoming digital. Therefore, a basic understanding of the effects of analog to digital conversion is key in understanding the design of modern signal processing algorithms. The signal and image processing field is a programming-intensive one in which various algorithms to perform these tasks are implemented.

Pertinent Required Courses
• EE 350 -- Continuous-time Linear Systems
• CMPSC 201 -- Computer Programming for Engineers Using C
• A statistics course (STAT 418 recommended)
Suggested Electives
• EE 351 -- Discrete-time Systems: a junior-level elective follow-up to EE 350 which provides a mathematical foundation for subsequent study in digital signal processing, digital control systems, and image processing
• EE 453 -- Digital Signal Processing: a follow-up to EE 351 that covers both the theory and application of DSP, including A/D and D/A conversion, digital filter design, and implementation of the Discrete Fourier Transform via the Fast Fourier Transform algorithm
• EE 454 -- Fundamentals of Computer Vision: a follow-up to CMPSC 122 which discusses topics such as object recognition, feature extraction from an image, and dynamic image analysis
• EE 455 -- Digital Image Processing: overview of image processing techniques and applications such as image enhancement, deblurring, and restoration
• EE 456 -- Artificial Neural Networks: covers the theory and application of how artificial neural network programs can be used to solve various engineering problems

Other courses that are tangentially related to signal/image processing are the following:
• EE 360 – Communication Systems I: a junior-level elective which provides a broad introduction to both analog and digital communication systems and modulation schemes
• EE 460 – Communication Systems II: a follow-up to EE 367 which focuses on the design of communication systems in the presence of noise and the corresponding statistics-based theoretical analysis
• CMPSC 442 -- Introduction to Artificial Intelligence: a programming-intensive course which provides the foundations for developing computer algorithms capable of decision making

REMOTE SENSING AND SPACE SYSTEMS
Overview
For many years, the largest research group in the EE Department at Penn State, the Communications and Space Sciences Laboratory (CSSL), has studied the ionosphere and related effects such as weather and thunderstorms. Problems of interest include the design of instrumentation as well as the study of natural phenomena. The research interests have influenced undergraduate courses in many ways, especially in COMMUNICATIONS, ELECTROMAGNETICS, and OPTICS. In addition, courses specifically in the area of space sciences have also been developed.

Pertinent Required Courses
• EE 330 -- Engineering Electromagnetics

Suggested Electives
• EE 471 -- Introduction to Plasmas: gives students a basic introduction to electromagnetic properties of plasmas, primarily in astrophysical and geophysical contexts
• EE 472 -- Introduction to Space Sciences: introduces students to the fundamentals of space sciences by providing a background in the physical/chemical properties of the atmosphere and ionosphere and discussing other topics such as solar wind and sun-trapped particle belts
• EE 474 -- Satellite Communications: a follow-up to EE 360 which provides an overview of satellite communication systems, including modulation schemes, satellite components, satellite link design and orbital mechanics
• EE 477 -- Fundamentals of Remote Sensing: studies various techniques for atmospheric measuring using both radio frequency approaches (RADAR, radiometry) and optical approaches (LIDAR -- laser radar, spectroscopy)

III. 3. Minors

Minors are secondary areas of study intended to complement a student’s major. Some popular/appropriate minors for EE students are: Engineering Leadership, Engineering Entrepreneurship, Electronic and Photonic Materials, Math, Music Technology, Nanotechnology, Physics, Bioengineering, Business/LA, Product Realization, and Information Science and Technology. Other available minors are listed in the Undergraduate Bulletin. You will usually, but not always, take extra courses to meet the requirements of the minor. Registration for a minor starts with the department or program that offers the minor. They will set forth a list of courses, which fulfill the requirements, and then you will seek several signatures on the application form. A minor consists of at least 18 credits with 6 of those credits being at the 400-level. Go to http://www.ee.psu.edu/undergradminors.asp for more information on available minors.

III. 4. Engineering Co-operative Education Program

This is an organized program in which a student alternates periods of academic study and full-time employment with an approved employer. The program calls for entry usually at the beginning of the junior year, and for a cumulative work experience of 3 semesters (and/or summers) before graduation.

Students in the Co-op program can earn up to 6 credits to count as related electives. One credit is awarded for the first co-op rotation, two credits are awarded for the second co-op rotation and three credits are awarded for the third co-op rotation.

For more information on the Co-op program, contact the College of Engineering Co-op office at 863-1032 or visit their web page at: http://www.engr.psu.edu/coop. You may also contact the Co-op Adviser, Professor Mark Wharton, for more information, and/or to plan your work and study schedules.

If you are not a formal Co-op student, you may still take summer jobs with engineering companies. However, you may not claim Co-op credits for jobs you arrange outside of the formal program.

III. 5. Concurrent Degrees

A student may, with the permission of both departments, simultaneously earn bachelor degrees in two majors. This concurrent degree program (previously called simultaneous degrees or multiple majors), requires careful planning with your faculty adviser. For additional details visit the following website: http://www.psu.edu/dus/handbook/concurrent.html
III. 6. **Professional Licensure**

Engineers who complete a series of standardized examinations and meet other requirements can obtain a Professional Engineer (or PE) license. Whether or not licensure will be important for your career is hard to predict, but certainly many EE’s do become licensed. Much depends on the nature of your job and your employer.

The PE license process should be started while you are still a student and fresh from your academic studies. The first step is the FE exam (previously EIT exam), for Fundamentals of Engineering. By itself, it does not qualify you to be licensed, but it starts the process which can then be completed with a practice-oriented exam at a later time. FE exams are held on campus, but you must sign up several months in advance. Watch for notices and take the exam when you are a senior.

Dates for FE exams through 2009 are as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>April</th>
<th>October</th>
</tr>
</thead>
<tbody>
<tr>
<td>2008</td>
<td>April 12</td>
<td>October 25</td>
</tr>
<tr>
<td>2009</td>
<td>April 25</td>
<td>October 24</td>
</tr>
</tbody>
</table>

All registration deadlines are as follows:  
April exams: December 1  
October exams: July 1

For more information about the FE exam and professional licensure, visit the National Council of Examiners for Engineering web page at [http://www.ncees.org](http://www.ncees.org). Useful information is also available from [http://www.engr.psu.edu/cde/FE_PE/fe_pe.html](http://www.engr.psu.edu/cde/FE_PE/fe_pe.html).

III. 7. **Finding Jobs**

There are multiple resources to assist you in finding employment after graduation. It is suggested that you utilize all of these resources.

- **Career Development Placement Service** – Visit Career Services (MBNA Career Service Center) well in advance of when you plan to start interviewing. Learn their procedures and what services they provide. (e.g., career counseling, information about employers and interview techniques, interest inventory tests, and a computer database on career options.) Over 1000 employers schedule 30-minute interviews from September through April. Their website is [http://www.sa.psu.edu/career](http://www.sa.psu.edu/career).

- **Career Fairs** – PSU hosts a large career fair every fall and spring. Smaller career fairs also appear from time to time. Watch for notices in the Collegian, in the Department office and via the EE listserv.

- **Job Notice Board/Binder** – The Electrical Engineering Department maintains a job notice board in the lobby of the EE East Building, a job notice binder in the Academic Affairs office, and an employer brochure file cabinet kept in the Academic Affairs Office.

- **EE Job Listserv** – The EE Department will occasionally alert students about job opportunities, via the EE job Listserv, which students can subscribe/unsubscribe to by visiting [http://www.ee.psu.edu/acadaff/listserv.html](http://www.ee.psu.edu/acadaff/listserv.html)
III. 8. Applying for Graduate School

If you are considering graduate study, consult with your adviser about research specialty areas and courses that you might take in preparation for entering graduate school. Ask about opportunities elsewhere as well as at Penn State. Once a year in the fall, the American Society of Engineering Education publishes a special issue devoted to graduate school programs and opportunities. Many faculty members will have a copy, and it is also available in the Engineering Library. Peterson's publishes a helpful printed graduate studies guide and a web page (http://www.petersons.com) with links to individual schools. Also check the Graduate Program file cabinet kept in the Academic Affairs Office. Finally, Career Services has information on graduate school as well. Go to http://www.sa.psu.edu/career/grad.shtml.

Most commonly, people apply for fall admission, and to be considered for whatever financial aid is available, they will normally have their application materials on file by the end of the previous fall semester. At Penn State, a student's file will consist of an application, letters of reference, official copies of all transcripts, and general GRE scores from exams taken in early fall. (Inquire in Kern Building at the beginning of the fall semester to schedule an examination). Include a personal statement regarding your background and technical interests to assist the admissions committee in evaluating your application and possibly identifying professors whose interests match your own.

In general, an undergraduate GPA of 3.0 or above is required for admission, although there are exceptions to this rule.

You should watch the bulletin boards in the EE East lobby for fall announcements of graduate fellowship opportunities.
